**2010 Best Green Remodeling Project Under \$250,000
National Award Winner**

With a rapidly growing family and a house on a tight lot, this project doubled the size of a house while also increasing the energy efficiency. By adding a full second floor and moving all bedrooms and laundry upstairs, the homeowners gained a larger kitchen with a new den and separate playroom for the kids. The house is now twice its original size, yet the heating and cooling bills were lowered. The house is now comfortable and healthy, and the family has the room needed to grow as well as room to entertain.
